

Cabinet U-Handles GN 564 with TPU Sheathing

Cabinet U-handles GN 564 have an elliptically shaped, shock-absorbing sheathing made of thermoplastic polyurethane (TPU). This creates a non-slip surface that is especially pleasant to touch and suitable for frequent contact even under heavy duty conditions, such as in dirty environments or cold temperatures. The sheathing also reduces the risk of injury and prevents damage to other parts and surfaces. The sheathing material is wear resistant, insulating, and weather resistant, and is suitable for use in a wide temperature range.

MDX Knobs for position indicators

The new MDX knobs, made in polyamide, are black coloured with a mat finish. The polypropylene cap is available in orange or grey colour. MDX knobs are specifically designed for mechanical and electronic position indicators: MDX-50 is made for mechanical DD50 indicators MDX-51 for mechanical and electronic DD51 indicators, and MDX-52 for mechanical and electronic DD52R indicators. MDX knobs are also available without graphic symbol, with an arrow indicating clockwise increase, with an arrow indicating anti-clockwise increase.
