**NEW** Stainless Steel-Indexing Plungers GN 818 in A4

GN818 Stainless Steel-Indexing plungers can be used in particularly corrosive environments due to the materials used.

The indexing plungers are available with or without rest position.

The version with rest position is used for such applications where the plunger has to stay in its retracted position. In that case, the knob is retracted and afterwards turned by 90 degrees.

Increased resistance in aggressive environments is becoming an increasingly important requirement in different industries. Therefore, corrosion resistant Stainless Steel A4 is gaining more and more meaning.

The material represents a long service life with no maintenance and provides an added investment security.

Stainless Steel A4 is not only designed for use in corrosive atmospheres, but also, for the food and medical industries.

2/20 Sedgwick street, Smeaton Grange, NSW 2567
