

**NEW** Levelling Feet with  
Plastic Coated Base Plate

Levelling feet GN30 & GN 32 can be used in a host of combinations of base plates and adjustable spindle versions.

The base plates of the steel levelling feet are now available with a **black plastic coating**(type A5).

The levelling feet GN 32 can be screwed to the mounting surface using the mounting flange, which prevents lateral shifting.

**NEW** SFX breather caps with  
splash guard

The new SFX and SFX+a breather caps in polyamide based technopolymer are made with a special internal geometry (Elesa patent) that prevents the leakage of fluids through a linear labyrinth (splash guard effect). The external snap-on anti-splash disc constitutes an additional labyrinth and provides a major protection in case of strong fluid projections. The SFX and SFX+a caps are also available with "tech-foam" air filter.

2/20 Sedgwick street, Smeaton Grange, NSW 2567
