

NEW GN 738.5 Stainless Steel Magnetic Plugs

Stainless steel magnetic plugs GN738.5 attract iron particles which might be floating in the fluid. The stainless steel makes them suitable for use in particularly aggressive environments.

The outer diameter of stainless steel threaded plugs are matched to screw-in holes for pipe fittings according to DIN 3852.

NEW Handle EBR-SWB with bistable electrical switch

The handle EBR-SWB with bistable electrical switch is used when it is necessary for the switching to be prolonged over time.

The Leds can be configured to indicate the specific status of the button (e.g., button in neutral position, green Led on, button switched on, red Led off).

Switching takes place by pressing the purple button, and remains switched until pressed again.

The handle is equipped with an 8-pole connector or cable for side or rear outputs.
