

NEW Couplings

Couplings create connections between drive shafts and driven shafts in order to transmit rotary motion and torque. For example, they are used to combine the shafts of motors and transmissions into a single drive unit.

The couplings are used in a very wide range of applications. The spectrum ranges from simple drives to complex control, regulation and measurement applications.

NEW Magnetic Catches GN 4470

Magnetic catches GN 4470 are characterized by their rubberized magnetic surface. This serves to reduce noise and prevents damage to the opposite part. The magnetic catches hold covers and doors closed.

They are used, for example, when magnetic catches are desired but the opposite part is non-magnetic.

The individual contact plates are supplied together with the magnetic catches.

To see some application examples please have a look to the product cart of GN 4470.
