

NEW Standard Parts with Antibacterial Surfaces

With each hand contact, bacteria and germs can adhere to a surface where they can proliferate unchecked over time, such as between two cleaning cycles.

The antibacterial standard parts of the Sanline product family can prevent bacteria and germs from propagating on an operating element.

NEW Hinges GN 437 in Stainless Steel A4

The Stainless Steel-Hinges GN 437 have a constant, adjustable braking torque, which can be changed by an adjusting screw.

This counteracts an automatic movement.

Due to the high-quality stainless steel A4 material, the hinge is particularly suitable for applications in highly aggressive conditions.
