

NEW Star Knobs and Hand Knobs in Stainless Steel A4

Star knobs GN 6336 and hand knobs GN 6335 in stainless steel A4 have a convex surface, which makes cleaning easier and helps prevent possible build-up of dirt. With the use of stainless steel A4, these are suitable for areas with special hygienic requirements and for applications in highly corrosive environments.

The knobs are available with both female thread and threaded stud.

NEW VB.839 SOFT Three-arm Knobs

The new VB.839 Soft knobs are provided with a soft coating in thermoplastic elastomer that provides a secure, comfortable grip even under unfavourable conditions of use, such as in the presence of moisture and grease and improves the comfort for the operator's hand, allowing absorption of vibrations during operation. They are particularly useful also in case of prolonged use. The coloured caps and the design of the product, associated with the soft coating, give the machinery to which it is applied an air of quality and refinement.
